AERIAL
PLATFORMS

Autovictor offers electric and diesel self-propelled and truck-mounted aerial platforms from 8 to 60 meters high. These vehicles are ideal for working at height and are available for rental with or without an operator. They can be learned in just a few minutes, making them suitable even for users with no prior experience in this field.

01 Truck-mounted Aerial Work Platforms

Autovictor truck-mounted aerial work platforms are approved for road traffic and equipped with outriggers for positioning. Working height: up to 60 m. Easy and quick movement between construction sites. Space is required for positioning and deployment of the outriggers. Used for road maintenance, urban construction, and overhead installations. Technical escorts and coordination with public authorities are available.

02 Articulated Aerial Platforms

Autovictor has platforms with a multi-section articulated boom, capable of overcoming obstacles thanks to multiple movements.

- Features:
 - o Working height: 10–48 m.
 - o Medium horizontal outreach (up to 20–25 m).
 - o Can be electric or diesel-powered
 - o Suitable for complex areas where inaccessible vertical points need to be reached.

autovictor

Aerial Platforms

03 Telescopic Aerial Platforms

Autovictor platforms with linear telescopic boom sections extend both horizontally and vertically.

- Features:
 - Working height: up to 60 m. Maximum horizontal outreach (up to 25–30 m).
 - Rapid, linear movements, less maneuverable in confined spaces than articulated platforms. Ideal for large construction sites, industrial construction, shipyards, or energy plants.

04 Scissor Lifts Aerial Platforms

Autovictor platforms with a scissor lift system (pantograph/scissor lift) allow exclusively vertical movements.

- Features:
 - Higher load capacity than other types (even >700 kg).
 - Working height: up to 30 m (typically 6–20 m).
 - Ideal for lifting workers and materials vertically without overreach. Frequently used in warehouses, plant engineering, and logistics.

Autovictor's fleet features a wide range of telehandlers to meet every need. Telehandlers are construction site machines capable of performing a variety of tasks and are divided into front and rotating models, the latter also offering the ability to rotate the tower. They can be used on rough terrain and in complex situations thanks to their four-wheel drive and impressive pushing power.

To meet the most diverse needs, Autovictor offers its customers a wide variety of easily interchangeable accessories, such as floating forks, fixed hooks, lifting winches, frame clamps, and a personnel basket.

01 Front Telescopic Handlers

Front-end telehandlers have a telescopic arm that extends straight forward and a fixed structure with the arm mounted in front of the chassis.

These lifts have a greater lifting capacity than rotary lifts of the same size.

They are primarily used for material handling on construction sites and in warehouses. They are equipped with various accessories: forks, buckets, winches, and platforms.

02 Rotating Telescopic Handlers

Equipped with a rotating turret that rotates up to 360°, rotating telehandlers offer greater operational versatility thanks to the ability to work without moving the machine. They are particularly suitable for complex construction sites, industrial maintenance, and the assembly of structures at height. They can be used with accessories such as forks, winches, man platforms, and jibs with winches. They also feature stabilizers for greater operational stability.

03 Forklifts

Forklifts are vehicles designed for lifting materials, primarily used in the logistics sector. Equipped with metal forks, they allow goods to be moved. Models with diesel engines and electric ones are available, ensuring their use in a variety of operating environments, both indoors and outdoors.

Aerial Platforms

Working height up to 60 meters

Aerial platforms are the ideal means of transport for jobs requiring one or more operators to be lifted and stationed at height, allowing them to work safely.

Autovictor offers a range of equipment available for rental, suitable for a wide variety of uses: from truck-mounted aerial platforms to scissor lifts, from articulated to telescopic platforms.

These equipment can be learned very quickly, allowing even inexperienced operators to operate the platform. For this reason, Autovictor offers a rental service without an operator for aerial platforms up to 57 meters, while for greater heights, Autovictor offers a rental service with an operator that allows for heights of up to 60 meters.

Main AUTOVICTOR Aerial Platforms

Telescopic Handlers

Up to 26 Meters / 6 Tons

Autovictor offers a comprehensive fleet of front telehandlers, rotating telehandlers, and forklifts, designed to ensure operational efficiency and maximum versatility on any type of construction site.

Autovictor offers three types of forklifts: front telehandlers, available with capacities up to 6 tons and operating heights up to 26 meters; rotating telehandlers, with their 360° rotating turret, offer superior flexibility in lifting and positioning operations; and industrial forklifts, available in various load capacities and construction configurations.

All Autovictor machines are also available on a cold rental basis. The entire fleet undergoes constant and rigorous maintenance to ensure safety, operational continuity, and high performance.

HSE ACADEMY & CONSULTING

Autovictor's **HSE Academy & Consulting** was established to turn theoretical knowledge into practical expertise for lifting, heavy-duty transport, and special equipment rental.

Our mission has three goals: to reduce injuries and damage, ensure regulatory compliance, and improve operational efficiency through targeted training, standard operating procedures (SOPs), and specialized HSE (Health, Safety & Environment) consulting.

Why HSE training is strategic in our industry

In lifting and heavy-duty transport, the variability of operating conditions (loads, environments, lifting devices, interactions with existing infrastructure) makes risk management complex. HSE training is not a cost center: it is an investment in business continuity and corporate reputation.

The direct benefits are:

- reduction in injuries;
- less downtime for investigations and litigation;
- optimization of operational sequences and machine times;
- greater operator accountability and improved decision-making in critical environments.

**Autovictor S.r.l. is a Training Organization
accredited by the Piedmont Region
(Certificate No. 1320/001) with Management Decision
No. 53 of 02/12**

Training Offering: Modular Content and Skill Levels

The Autovictor **HSE Academy & Consulting** offers operator training programs tailored to different targets:

1. Mobile Elevating Work Platforms
 - With outriggers - Without outriggers
2. Mobile Crane
 - With telescopic boom and fixed jib
 - With telescopic boom and slewing jib
3. Truck-mounted Cranes
4. Self-Propelled Ride-On Forklifts
 - Self-Propelled Industrial Trucks
 - Fixed Telescopic Boom Forklifts
 - Rotating Telescopic Boom Lifts

Teaching Methods

- Theoretical lessons (regulations, principles) and practical tests
- Real-world case studies from Autovictor operations
- Practical field training: SPMT exercises, full-scale rigging, controlled load tests.

In these courses, the Academy guides operators through risk analysis in machine use and handling operations: hazard identification; Estimates probability and severity; technical mitigations and critical phases.

The Autovictor **HSE Academy & Consulting** becomes a distinctive element when specialized HSE training and consulting services lead to the following results:

- Improves team and construction site safety;
- Increases client trust and the ability to secure complex contracts;
- Eliminates hidden costs (delays, damages, disputes) through demonstrated professionalism;
- Creates a virtuous cycle of continuous improvement.

Keep on moving to the future.

HSE ACADEMY & CONSULTING

AUTOVICTOR HSE ACADEMY & CONSULTING has a team of experienced and qualified professionals, able to offer a specific service according to the needs of each individual client, with the possibility of carrying out training courses directly at the companies' homes or by making dedicated training rooms available at its own headquarters.

Occupational health and safety training:

Pursuant to Legislative Decree No. 81 of 9 April 2008, as amended.

- COMPANY SAFETY TRAINING FOR WORKERS, SUPERVISORS, AND MANAGERS
- SPECIFIC TRAINING FOR WORKING AT HEIGHTS, CAT III PPE, CONFINED SPACES, RIGGER, FIRE FIGHTING FOR LEVEL I-II ACTIVITIES
- TRAINING FOR SPECIAL EQUIPMENT: MEWPs, TRUCK-MOUNTED CRANES, FORKLIFT TRUCKS, MOBILE CRANES
- TRAINING AVAILABLE AT AUTOVICTOR'S CLASSROOMS OR AT YOUR HOME

autovictor

 HSE Academy & Consulting

Health, safety and environmental consultancy:

- GENERAL RISK ASSESSMENT (DVR)
- RISK ASSESSMENT WITH TECHNICAL AND PROFESSIONAL SUITABILITY VERIFICATION (DUVRI), VERIFICATION OF ANNEX XVII TU 81/08
- DETAILED ASSESSMENT OF CHEMICAL RISK, WORK-RELATED STRESS, NOISE, MECHANICAL VIBRATIONS, MANUAL HANDLING OF LOADS, FIRE, ETC.
- EMERGENCY MANAGEMENT: EMERGENCY PLAN AND PROCEDURES, ASSISTANCE IN CONDUCTING EMERGENCY TESTS
- EXTERNAL SUPPORT FOR RSPP DL WITH THE DEVELOPMENT OF PROCEDURES AND OPERATIONAL STRATEGIES

Assignment assistance:

- HEAD OF PREVENTION AND PROTECTION SERVICE (RSPP)
- PREVENTION AND PROTECTION SERVICE ASSISTANT (ASPP)
- HEALTH SAFETY ENVIRONMENT HSE
