LIEBHERR

Dimensions

Basic machine with undercarriage

Operating weight

The operating weight includes the basic machine with HD undercarriage, 2 main winches 250 kN including wire ropes (90 m) and 11 m main boom, consisting of A-frame, boom foot (5.5 m) and boom head (5.5 m), 26.3 t basic counterweight, 800 mm 3-web grousers and 50 t hook block.

Total weight _____ approx. 89 t

Ground pressure

Ground bearing pressure _____ 1.04 kg/cm²

Equipment

Main boom (No. 1311.xx) max. length _____ 68 m
 Fixed jib (No. 0806.xx) _____ 11 m - 32 m
 Modular designed equipment for operation as crane, with dragline or clamshell. For dragline operation, a rotating fairlead is fitted into the boom foot. This minimizes the rope angle to drum, which results in lower rope wear.

Remarks

1. The lifting capacities stated are valid for lifting operation only (corresponding with crane classification according to F.E.M. 1.001, crane group A1).
2. Crane standing on firm, horizontal ground.
3. The weight of the lifting device (hoisting ropes, hook block, shackle etc.) must be deducted from the gross lifting capacity to obtain a net lifting value.
4. Additional equipment on boom (e.g. boom walkways, auxiliary jib) must be deducted to get the net lifting capacity.
5. For max. wind speed please refer to lift chart in operator's cab or manual.
6. Working radii are measured from center of swing and under load.
7. The lifting capacities are valid for 360 degrees of swing.
8. Calculation of stability under load is based on ISO 4305 Table 1 + 2, tipping angle 4°.
9. The structures are calculated according to F.E.M. 1.001 - 1998 (EN 13001-2 / 2004).

Technical description

Engine

Power rating according to ISO 9249, 450 kW (603 hp) at 1900 rpm
Engine type ———— Liebherr D 9508 A7
Fuel tank ———— 830 l capacity with continuous level
————— indicator and reserve warning
Engine complies with NRMM exhaust certification EPA / CARB Tier 3 and 97/68 EC Stage III.

Hydraulic system

The main pumps are operated by a distributor gearbox. Axial piston displacement pumps work in closed and open circuits supplying oil only when needed (flow control on demand). To minimize peak pressure an automatically working pressure cut-off is integrated. This spares pumps and saves energy. The hydraulic oil is cleaned through electronically controlled pressure and return filters.
Possible contamination is signalled in the cabin. The use of synthetic environmentally friendly oils is possible. Ready made hydraulic retrofit kits are available to customize requirements e. g. powering casing oscillators, VM vibrators, hydraulic grabs, fixed leaders etc.
Working pressure ——— max. 350 bar
Oil tank capacity ——— 820 l

Boom winch

Line pull ——— max. 105 kN
Rope diameter ——— 20 mm
Boom up ——— 44 sec. from 15° to 86°

Swing

Consists of roller bearing with external teeth for lower tooth flank pressure, fixed axial piston hydraulic motor, spring loaded and hydraulically released multi-disc holding brake, planetary gearbox and pinion. Swing speed from 0 – 4.6 rpm continuously variable, selector for 3 speed ranges to increase swing precision.
Option:
Second swing drive

Noise emission

Noise emissions correspond with 2000/14/EC directive on noise emission by equipment used outdoors.

Main winches

Winch options:
Line pull (nom. load) ——— 160 kN ——— 200 kN ——— 250 kN
Rope diameter ——— 26 mm ——— 30 mm ——— 34 mm
Drum diameter ——— 580 mm ——— 630 mm ——— 750 mm
Rope speed ——— 0-99 m/min - 0-101 m/min - 0-81 m/min
Rope capacity 1st layer - 51.9 m ——— 40.6 m ——— 38.8 m
The winches are outstanding in their compact design and easy assembly. Clutch and braking functions on the free fall system are provided by a compact designed, low wear and maintenance-free multi-disc brake. The drag and hoist winches use pressure controlled, variable flow hydraulic motors.
This system features sensors that automatically adjust oil flow to provide max. winch speed depending on load.
Option:
Auxiliary winch — 70 kN in boom foot
Tagline winch ——— 30 kN with free fall

Crawlers

The track width of the undercarriage is changed hydraulically. Propulsion through axial piston motor, hydraulically released spring loaded multi-disc brake, maintenance-free crawler tracks, hydraulic chain tensioning device.
3-web grousers ——— 800 mm
Drive speed ——— 0 – 1.34 km/h
Option:
• 2-speed hydraulic motor for higher travel speed
• Self-assembly system, jack-up system

Control

The control system – developed and manufactured by Liebherr – is designed to withstand extreme temperature changes and the rough heavy duty tasks common in the construction industry. Complete machine operating data are shown on a high resolution display. The crane is equipped with proportional control for all movements, which can be carried out simultaneously.
Dragline operation: A special "Interlock" control system is an option available. It is designed for power lifting of the dragline bucket without using the drag winch brake.
On request, Liebherr also offers special custom designed control systems for free fall winches.
Operation: Left joy stick for boom winch and swing, right two directional levers for winch I and II. Crawler control is actuated with the two central foot pedals. Additionally, hand levers can be attached to the pedals.
Options:
• Special demolition control system
• MDE: Machine data recording
• PDE: Process data recording
• GSM modem

- 1) Lifting a load exceeding the line pull of one winch is only allowed if it can be ensured that each individual winch is not overloaded. When working with a mechanical 2-rope grab the total load to be lifted is limited by the line pull of one winch. Rigging and ropes are part of the load.
- 2) Max. capacities in metric tons do not exceed 75% of tipping load. Crane standing on firm, horizontal ground.

Capacities in duty cycle operation are for reference only and are not programmed in the LMI system.

All loads and counterweight configurations are max. values and must not be exceeded.

Weight of additional equipment on boom (e.g. walkways, hose drums etc.) must be deducted to get the net capacity.
